NOTABLE BIRTHDAY

Buck Slayton will celebrate his 95th birthday on March 8. He is the Society’s most senior member and with John Brace has been a part of all the early design and construction work at Leakin Park. Buck was responsible for the installation of the ¾” scale, too. We all wish him a “Happy Birthday”.

SAFETY MEETING

“Run Day” in March is the annual, required Safety Meeting. Anyone who will be running locomotives or acting as conductor or working with passenger loading at the station during this year must either attend the meeting or have a separate session with a member of the Board. Please make every effort to attend the meeting. Whether you attend the meeting or have a separate session, be sure to sign the attendance register for 2008. The purpose of the meeting is to read completely through the current CALS Safety Manual to remind everyone of the details and to respond to questions. This activity is performed in order to have proof that the Society does what is needed to ensure that the operation of Public Run Days will be done in a safe manner. If it were to happen that there is an incident during the year, it will be extremely important that all who are involved have their signatures on the register.

See you at Hamilton Station on the 9th at the normal Run Day start time of 11 am.

TIMONIUM

The Society had a very good showing at the February Timonium Train Show. The array of equipment displayed was quite impressive. Several members were at the tables with their equipment. Perhaps the grandest display was the boiler now added to Steve McDonald's Big Boy chassis, but Harry Horney's new FA and FB pair in Santa Fe were also quite nice. Larry Law, Glenn Sharpe and Mike Schroeder helped.

ACTIVITY NOTES

Quite a bit less activity has occurred than anyone would have wished. The weather on the Wednesday and Saturday work sessions has often been miserable, and the construction supplies have not kept up sufficiently to keep building track panels. In the meantime, a few things have been accomplished. Track has been taken up from the entrance crossing around to the middle of the straight on the east side, and the panels have been disassembled and the rails prepared for re-use. All completed panels have been moved to one of the three containers in the field. The lawn tractors and push mowers have been serviced, and the ballast regulator (track sweeper) is being modified to be able to lift the brushes rather than having to stop the engine. In preparation for the running season, all the gondolas and green coaches have had their brakes inspected and adjusted where necessary. The furnace in Hamilton Station failed to ignite and had to be serviced on a very cold Saturday.
